Design and Production (MFA)

Design students develop knowledge and skills in three areas: scenery, costume and lighting. You'll test your skills through practical applications in department productions. You'll specialize in one area of design with a minor specialization in another. For your final project, you'll design one or more elements of a fully-realized production.

Graduate Student Work

Aaron Veldstra, Drawing/Intermedia, Our Anaerobic Future

Our graduate programs in the Department of Art & Design offer thesis- and course-based degrees:

- Master of Design (MDes) with specializations in either Visual Communication Design or Industrial Design
- Master of Fine Arts (MFA) with specializations in Painting, Sculpture, Printmaking or Drawing/Intermedia
- Master of Arts (MA) History of Art, Design, and Visual Culture with both thesis and course-based options
- Doctor of Philosophy (PhD) History of Art, Design, and Visual Culture

WHY STUDY HERE?

What makes the Department of Art & Design such an excellent place to work and study? Our graduate programs offer:

- engaged supervision and technical support
- inter- and poly-disciplinary approaches
- contemporary critical theory
- research for the public good
- scholarships and teaching assistantships

Concordia

Research and Analysis Summary

Gaps/opportunities:

- Science programs limit creativity

- Arts programs lack results driven side

- Most design programs

Why MDes can be different:

- It's the Intersection of both (In my mind)

“Sometimes Science is more Art than
Science”

“Sometimes Art is more Science than
Art”

Target Audience

- **Art Student Persona** - who? why? factors?
 - Ex-Student who wants to create something usable or a product instead of art
 - They want to continue creating but wants something fairly more scientific than before
- **Science Student Persona** - who? why? factors?
 - Ex-Student who want to make something human centered and accessible instead of more standard hardware or software
 - Misses the human element of design and needs to learn that specific creativity

Target Audience

- **Persona Coming from Academia** - who? why? factors?
 - Ex-Student fed up with traditional academia who wishes to create something akin to a thesis or capstone
 - Tired of professors highly regulating every inch of their work in newer mediums older profs aren't good in
(yes i'm projecting here)
- **Persona Coming from Industry** - who? why? factors?
 - Ex-Worker who wishes to come back, potentially wanting to pivot careers by going interdisciplinary
 - Wants a change of pace after staying in the 9 to 5 rhythm for an extended period

Core Values

Trust Curiosity Growth Reciprocity

These matter because:

- People tired of their backgrounds want to expand horizons and change systems - Growth & Curiosity
- People with flawed backgrounds want change - Growth
- Ex-Students who take issues with academies rigid structures - Trust and Reciprocity
- People who want to create with a multi pronged approach to the problem - Curiosity, Reciprocity, and Growth

Brand Strategy and Differentiator

- So what **DOES** make MDes unique?
 - The anti establishment iteration
 - The room to create
 - But in my mind: an intersection of art & science
 - It allows science students to learn creativity
 - It allows arts students to orient to industry
 - It allows a sweet spot of not too much/little academia
 - It gives room for a wide range of professionals to work on their strengths and supplement weaknesses

Timeline Proposal

Week 1-2:

Rapid prototyping and logo generation

Week 3-4:

User testing, surveys, and iteration

Week 5-6:

Fine tuning and integration
